

Food truck

Project Overview:

The project focuses on creating a digital platform tailored specifically for **food trucks**, not restaurants. This distinction is important — our design addresses the unique characteristics of food trucks, such as mobility, real-time location updates, and simplified customer interactions. The platform allows users to discover nearby food trucks, explore live menus, view schedules, and get notifications about changes in location and availability. It enhances the food truck experience by prioritizing convenience, accessibility, and real-time service.
